Sonoma County Type 3 Wet Rotation Procedure

1. ECC determines the need to hire WET engines (type 3 only) from Sonoma County (ECC should provide a courtesy notification to Sonoma CAL FIRE BC's).
2. ECC contacts REDCOM Supervisor to place the order for WET hire engines.
3. ECC supplies all known information to REDCOM Supervisor including, LNU incident number, Request number, reporting location and reporting time.
4. REDCOM Supervisor advises REDCOM Duty Chief of the pending request.
5. REDCOM Duty Chief consults the WET hire rotation list on the Sonoma Fire Chiefs website.
6. REDCOM Duty Chief advises REDCOM Supervisor which agencies need to be contacted and the order to do such.
7. The REDCOM Supervisor will then contact the ECC and advise the ECC of the engine identifiers of the agency(ies) accepting the assignment and contact information.
8. Agencies that accept the assignment have (1hr) to go en-route to the station assignment given to them by the ECC. The engine is to notify St. Helena on LNU WEST once en-route and available in respective response area.

Once an agency either accepts or denies a request to fill the assignment, the REDCOM Duty chief will rotate that agency to the bottom of the WET list. Agencies assigned to an incident or strike team will not be moved on the list.

The REDCOM Duty Chief will also modify Active Status if necessary once agencies accept the Wet-Hire assignment. Agencies should be aware that hired engines can be placed anywhere in LNU and not specifically Sonoma County.

This process is subject to revision for improvement.
